BEFORE THE DIVISION OF OIL, GAS AND MINING  
DEPARTMENT OF NATURAL RESOURCES  
STATE OF UTAH

---ooOoo---

IN THE MATTER OF TENTATIVE : NOTICE OF TENTATIVE  
DECISION TO APPROVE A : DECISION TO APPROVE  
LARGE MINING AND RECLAMA- :  
TION PLAN FOR I & P INVEST- : NO. M/003/060  
MENTS, GREEN PEAK MINE :  
BOX ELDER COUNTY, UTAH

---ooOoo---

THE STATE OF UTAH TO ALL OPERATORS, TAKERS OF  
PRODUCTION, MINERAL AND ROYALTY OWNERS, AND  
PARTICULARLY ALL PERSONS INTERESTED IN SECTIONS  
11, 14, AND 23, TOWNSHIP 10 NORTH, RANGE 16  
WEST, SLBM, BOX ELDER COUNTY, UTAH.

Notice is hereby given by the Division of Oil, Gas  
and Mining of its tentative decision to approve the Large  
Mining Operations Notice of Intention for I & P Invest-  
ments Green Peak Mine. Mining activities will affect the  
following area: Portions of: the SE 1/4 of the SW 1/4  
of Section 11; the N 1/2 of the NE 1/4 of the NW 1/4  
and the SW 1/4 of the SE 1/4 of the NE 1/4 of Section  
14; and the N 1/2 of the NE 1/4 of the NE 1/4 of Section  
23; Township 10 North, Range 16 West, SLBM, Box  
Elder County, Utah.

I & P Investments has submitted a permit application  
to expand an existing small mining project to a large  
mining operation. Reclamation surety will be provided  
to the Division for the proposed project disturbance. The  
operator will employ the following mining and reclama-  
tion techniques on approximately 12.4 acres of federal  
land.

**During Operations:**  
All available soil materials will be salvaged prior to  
quarry operations and stockpiled for use during recla-  
mation. A hydraulic excavator will be used to extract  
the stone from the quarry and load it on trucks to haul  
to the mill area to be split, sorted and prepared for  
market. Waste materials will be hauled to the waste  
rock dump area. Mining will be conducted in two  
phases, with each phase removing about 15 feet of ma-  
terial over the quarry area. Near the end of phase one  
(approximately two years), the waste rock dump will be  
of sufficient size that the operations at the mill site will  
be moved to the waste rock dump area. The mill site  
will then be reclaimed. Infrequent blasting may occur  
and will follow a MSHA approved blasting plan. Stone  
is split by hand to uniform size and stacked on pallets  
for shipping. Unusable material is placed on the waste  
dump. When sufficient areas are quarried out, waste  
materials will be left at the quarry location. If market  
conditions warrant, crushed and/or tumbled materials  
will also be sold. Dust will be controlled on the site and  
oads by using gravel and/or water. Equipment includes  
1 D-8 bulldozer, three tractors, one water truck, ten  
haul trucks and a 45kw generator.

**After Operations:**  
The mill area will be reclaimed when there is sufficient  
area on the waste rock dump area to prepare rock for  
market (approximately two years). The mill area will  
then be recontoured with soil material added at a 6"  
depth and 10 tons per acre of composted manure or  
biosolids will be applied. The area will then be ripped  
to a two-foot depth and seeded with the approved seed  
mix. A berm of rock will be left along the road to pro-  
tect the reclaimed area.
